

PRIVACY IMPACT ASSESSMENTS: TOP TEN TIPS FOR ASSESSING PRIVACY RISKS

Nicole Hamacher, Privacy Impact Assessment
Specialist, Treasury Board Secretariat

Eric Lawton, Senior Privacy Specialist, City of Toronto

Moderator: Renee Barrette, Director of Policy,
Information and Privacy Commissioner of Ontario

2015 Ontario Connections Conference

Outline

You have been asked to do a Privacy Impact Assessment (PIA). Now what?

The focus of the presentation is on providing you with answers to the following questions:

- **What is a PIA?**
- **Why** do you need to do this?
- **When** is a PIA conducted?
- **Where** do you start?
- **Who** should conduct the PIA? Who needs to be involved?
- **How** do you identify privacy risks?
- **How** do you get buy-in? **How** long does this take?

What is a PIA?

- A PIA refers to a process/approach for identifying and analyzing privacy risks when changing or developing programs or systems.” (OPS PIA Guide, page 5)
- A good PIA analysis provides senior management and program and system designers with sufficient information to reduce, mitigate or avoid different types of privacy risks.

Top Tip: A PIA is a point in time analysis.

Why do a PIA?

- **Ethical** – respond to Fair Information Practices and transparent personal information handling practices.
- **Risk mitigation** – the best tool to identify privacy risks, document countermeasures and implement mitigation strategies.
- **Compliance** – internal directives, policies and legal and legislative requirements
- **Save time and money** – avoid costly re-designs and risk of project cancellation.

Top Tip: Put yourself in the shoes of the data subject.

When to do a PIA?

- When a program/initiative/technology involves the personal information of an identifiable individual.
- Remember to choose the right tool because you may not need a full PIA to begin the process.

Top Tip: Begin the PIA at the earliest opportunity.

Who Should Conduct the PIA?

- While privacy professionals have the knowledge, skills and abilities to conduct PIAs, you may not have access to a dedicated PIA Specialist.
- PIA Reports can be conducted by a subject matter expert (e.g., policy, business, project member) by using publicly available guides and tools.

Top Tip: Do not do this alone!

Where should you start?

- Understand the project/program description and scope (e.g., what is happening, why and timelines)
 - Is personal information involved?
- Answer the question, “What information is being handled, by whom and why?”
 - Need to understand the data flows
 - A data model identifies the data elements and modality (e.g., one to many relationship) but doesn’t identify who is handling the information and for what purposes.

Top Tip: Begin with your data flow diagram.

Methodologies

There are many different methodologies that can be used including:

- Canadian Standards Association Fair Information Principles/Practices
- Privacy by Design foundational principles
- Test for Necessity and Proportionality
- Legislative compliance review

Top Tip: Take advantage of existing methodologies but do not cut and paste.

How do you identify privacy risks?

- Common privacy risks:
 - Unauthorized access/disclosure, identity theft, secondary uses without data subject's knowledge, inaccurate information, excessive retention, and transaction monitoring/big brother – real or perceived risks of unauthorized access and profiling
- Common privacy harms – loss of liberty, customer trust, discrimination, stigmatization, economic loss (e.g., due to identity theft)
- Once you identify the privacy impacts you need to identify mitigation strategies (how can we reduce the risk of those privacy impacts – what action(s) can we take).

Top Tip: Do not forget internal threats and ask yourself, “What is the worst thing that could happen?”

Identify Mitigation Strategies

- Work with the project team to design project or initiative in a way that mitigates the privacy risks or impacts.
- Mitigation strategies do not necessarily include strategies to eliminate risks.
- Identify actions that will reduce risks identified in your analysis.

Top Tip: Tailor workable solutions to the risk owner.

How do you get Buy-in (PIA signed)?

- Ensure that you understand the **risk tolerance** (what can be managed) and **risk appetite** (what is willing to be managed) of the responsible senior decision makers and that your PIA speaks to this
- Use the **project or risk owner's language**
 - Use terms found in mandates, business plans, public commitments, etc.
- **Rank/prioritize privacy risks and actions**
- Ensure that your PIA report **clearly communicates** the privacy risks and is shared with the senior decision makers responsible for the project or initiative.

Top Tip: Leverage the collaborative relationships with partners and understand risk owner's business plan.

How long does this take?

- “It depends”
- I’ve done all this work, I’m done, right?
 - PIA Report is a point in time assessment; new issues and changes impacting privacy may arise during the program/project
 - Align review of PIA Report/Mitigation Plan with existing review/approval processes: financial/budgetary cycles, strategic/operational planning review, etc.

Top Tip: Do not underestimate the time it takes to do the PIA, write the PIA report and for your partners to complete their review.

The Top Ten Tips

1. **A PIA is a point in time analysis.**
2. **Put yourself in the shoes of the data subject.**
3. **Begin the PIA at the earliest opportunity.**
4. **Do not do this alone!**
5. **Begin with your data flow diagram.**
6. **Take advantage of existing methodologies but do not cut and paste.**
7. **Do not forget internal threats and ask yourself, “What is the worst thing that could happen?”**
8. **Tailor workable solutions to the risk owner.**
9. **Leverage the collaborative relationships with partners and understand risk owner’s business plan.**
10. **Do not underestimate the time it takes to do the PIA, write the PIA report and for your partners to complete their review.**
