Generative Artificial Intelligence

Education Sector

Javier Ruiz-Soler
Senior Technology and Policy Advisor

Information and Privacy
Commissioner of Ontario
Commissaire à l'information et à la protection de la vie privée de l'Ontari

AERO-AOCE

BIO

Javier Ruiz-Soler, PhD Senior Technology and Policy Advisor

My work consists in identifying and analyzing trends in technology (information security governance, privacy enhancing technologies, artificial intelligence technologies, data access issues, and governance) and contributing to developing the IPC's policy capacity on Emerging Technologies.

I hold a PhD in Political Science and Technology.

Agenda

- IPC Mandate
- Brief History of Al
- Generative Al
- Educational Al Governance
- Ontario Al landscape
 - Principles with OPC and other Privacy Offices in Canada
 - Bill 194
- Resources
 - OECD Principles
 - Guidelines use of Gen. Al
 - IPC Procurement Guide
 - IPC Digital Charter for Ontario Schools
 - Consulting

IPC Mandate

Information and Privacy Commissioner of Ontario

Patricia Kosseim

- Ontario's Information and Privacy Commissioner is an officer of the legislature
 - Appointed by and reports to the Legislative Assembly of Ontario
 - Independent of the government of the day
- The IPC has authority under the following laws:
 - Freedom of Information and Protection of Privacy Act (FIPPA)
 - Municipal Freedom of Information and Protection of Privacy Act (MFIPPA)
 - Personal Health Information Protection Act, 2004 (PHIPA)
 - Child, Youth and Family Services Act, 2017 (CYFSA)
 - Anti-Racism Act, 2017 (ARA)
 - Coroners Act

IPC's Overall Role & Mandate

In addition to overseeing provincial access and privacy laws, the office of the IPC also serves the government, public institutions and the public through its mandate to:

- Resolve appeals when access to information is refused
- Investigate privacy complaints related to personal information
- Ensure compliance with the province's access and privacy laws
- Review privacy policies and information management practices
- Conduct research on access and privacy issues and provide comment on proposed legislation and government programs
- Educate the public, media and other stakeholders about Ontario's access and privacy laws and current issues affecting access and privacy

IPC'S VISION

Enhance Ontarians' trust that their access and privacy rights will be respected by ...

IPC

- Strategic Priorities
- IPC Technology Team
 - Al
 - Cybersecurity
 - Tech Expertise

Privacy and Transparency in a Modern Government

Advance Ontarians' privacy and access rights by working with public institutions to develop bedrock principles and comprehensive governance frameworks for the responsible and accountable deployment of digital technologies.

Trust in Digital Health

Promote confidence in the digital health care system by guiding custodians to respect the privacy and access rights of Ontarians, and supporting the pioneering use of personal health information for research and analytics to the extent it serves the public good.

Children and Youth in a Digital World

Champion the access and privacy rights of Ontario's children and youth by promoting their digital literacy and the expansion of their digital rights while holding institutions accountable for protecting the children and youth they serve.

Next-Generation Law Enforcement

Contribute to building public trust in law enforcement by working with relevant partners to develop the necessary guardrails for the adoption of new technologies that protect both public safety and Ontarians' access and privacy rights.

Brief History of Al

Al Then: The First 50 Years

1956:

McCarthy creates term "Artificial Intelligence"

1964:

Dissertation proving AI could solve simple word problems

1979:

First automated driving vehicle

1950s until the Late 2000s

1950: Turing Test

1960s:

Emergence of math used in inference/pr ediction

1974:

Medical AI to assist in diagnoses **1980s-late 200**0s:

Rise of reinforcement-theory
Al models that 'learn' over time

Al Now: The Current Inflection Point

- GPT-2: 1.5 billion parameters
- GPT-3: 175 billion parameters
- GPT-4: Unknown number parameters
- Google BARD: 540 billion parameters
- Facebook LLaMA: 65 billion parameters

2019 GPT-2 2020 GPT-3 **2022** GPT-3.5 **2023** Facebook LLaMA

2023 Google Bard

2023 GPT-4

2019 - Today

What AI Technologies "Know"

- "Toronto is the provincial capital of Ontario"
- Contemporary large language models and appearance of meaning

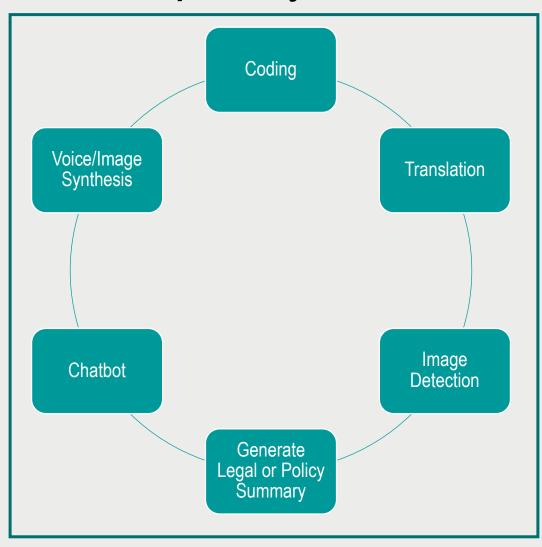

Contemporary Use Cases

Bias, Equity, and Discrimination

Pressing Challenges

Exacerbating Policy Challenges

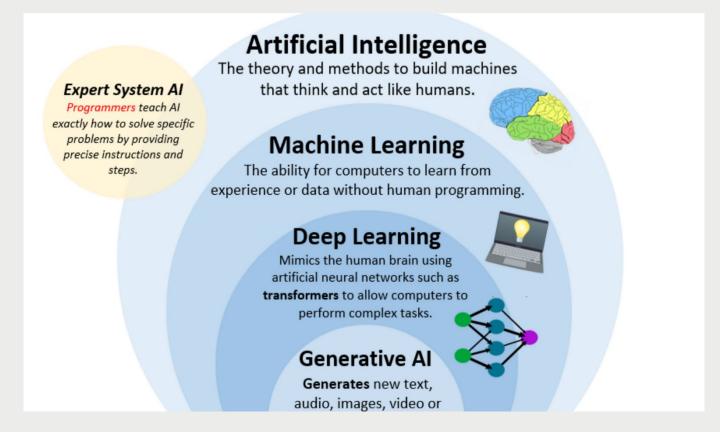

Practical Deployment Question

Pressing Challenges

- 1. Training Data: De-biased? Sourced legally?
- 2. Large Language Model Memories: Emits intimate images?
- 3. Model Update Costs: Expensive to fix
- 4. Variable Outputs: Inconsistent generative responses
- 5. Class Breaks: Break once, break everywhere
- 6. Attack Surfaces: Experts unsure how to secure

Generative Al

Generative Al

Definition: Al models that create new content, such as text, images, or music, based on the data they are trained or

Examples: ChatGPT, DALL-E, Midjourney.

Purpose: Enable new forms of interaction, enhance creativity, and personalize educational content.

Generative AI in Education: Why Now?

Al Advancements: Rapid improvements in Al capabilities, accessibility, and affordability.

Student Engagement: Opportunities to make learning more interactive and relevant.

Skills for the Future: Preparing students for Al-integrated workplaces.

Applications of Generative AI in Education

- 1. Personalized Tutoring: Adaptive learning experiences tailored to individual student needs.
- 2. Automated Assessment: Al-assisted grading and feedback on written assignments and exams.
- 3. Content Creation: Generating educational content such as quizzes, lesson plans, and multimedia resources.
- 4. Language Support: Al-powered language translation and learning aids.
- **5. Creative Inspiration**: Tools for art, music, and literature classes to stimulate creativity.

Benefits of Generative AI in Education

Personalization: Tailored learning experiences for each student's pace and style.

Scalability: Supports large numbers of students with automated resources.

Accessibility: Offers multilingual support and accommodates diverse learning needs.

Efficiency: Reduces teachers' workload, allowing more time for direct student interaction.

Challenges and Considerations

Ethical Concerns: Privacy, data security, and consent for Al usage.

Academic Integrity: Managing risks of plagiarism and over-reliance on Al tools.

Bias and Fairness: Avoiding biases that could perpetuate educational inequality.

Teacher Training: Ensuring educators are equipped to integrate AI effectively.

Role of Teachers and Educators

Facilitators of Al Use: Guide students in responsible and ethical Al usage.

Adaptation and Training: Developing new skills to complement AI capabilities.

Critical Thinking Encouragement: Helping students question and validate Al-generated content.

Future of Generative AI in Education

Lifelong Learning Pathways: Personalized curriculum support from early education to higher ed. **Enhanced Collaboration**: Al for student collaboration, knowledge sharing, and project-based learning. **Al as a Learning Partner**: Vision for generative Al as an integrated educational tool assisting across subjects.

Educational Al Governance

Educational Tools Al Governance

- Students go out: use of AI for academic work with integrity questions, risks, etc. Need for Risk management.
- <u>Institutional tools</u>: purchased or free for education. Vendor might process PI.
- Referral tool: teacher says "go find AI tool for this assignment".

Privacy Impact Assessment: is a tool for organizations to manage risk. Identify, assess and mitigate privacy risks.

Most schools conduct PIA when adopting new technology.

If teacher (institutional agent) uses ChatGPT for work, which is to develop business, in this case educational business. That becomes an institutional tool. Without proper program or deployment, it might cause risks (for example typing PI, etc.). Similar to the concept of shadow IT risk.

Ontario Al Landscape

State of Art in the Province

Principles with OPC and other Privacy Offices

- Considerations for the application of key privacy principles to generative AI technologies
 - Legal Authority
 - Appropriate Purpose
 - Necessity and Proportionality
 - Openness
 - Accountability
 - Individual Access
 - Limiting collection, Use and disclosure
 - Accuracy
 - Safeguards

Link: Principles for responsible, trustworthy and privacy-protective generative AI technologies - Office of the Privacy Commissioner of Canada

Bill 194

- Ontario government introduced Bill 194, the <u>Strengthening Cyber Security</u> and <u>Building Trust in the Public Sector Act</u>, 2024, aimed at strengthening digital infrastructure and data privacy protections within public entities and services in Ontario
 - Require public sector entities to develop and implement cyber security programs, and submit reports on cyber security.
 - Regulate how public sector entities, identified by regulation, use artificial intelligence ("AI") systems.
 - Allow the government to make regulations on how children's aid societies and school boards collect, use, retain or disclose digital information relating to individuals under age 18.

Bill 194 and Al

- Provide information to the public about their use of the AI system;
- Develop and implement an accountability framework respecting their use of the AI system (which may require roles and responsibilities for specified individuals);
- Take steps to manage risks associated with the use of the AI system (which may include reporting and record-keeping);
- Use (or not use) the AI system in accordance with any prescribed requirements;
- Disclose information about the technical use of the AI system; and
- Ensure that an individual exercises oversight of the use of the AI system and what additional information that individual must make available (which may include publishing how inquiries may be made about the entity's use of such systems).
